Scan code to download : RDFit APP

Device connection

For the first use, you need to connect the APP for calibration. After the connection is successful, the bracelet will automatically synchronize the data. After the pairing is successful, the APP will pop up a guide page. According to the instructions, jump to the mobile phone system Bluetooth search to WellAudio device and connect it. After the connection is successful, you can make / receive calls and listen to music. (Note: if the mobile phone system has not been searched WellAudio equipment, please enter the menu and set it to On, you cannot make calls without connecting the equipment.)

2.APP will automatically save the Bluetooth address of the bracelet, and will automatically search and connect to the bracelet.

3.Android phones use all notification permissions to read contact info and give the app background running in the phone settings.
